

# Introduction to Research Practices ALS 1984

WF 1:25-2:40 PM,  
Litton-Reeves 200

## Course Goals:

- Create a community of practice where students learn the process of executing a research project.
- Understand best practices for engaging in undergraduate research.

## Why should I enroll in this course?

As innovation continues to thrive in the space between disciplines, there is an increasing need to pursue interdisciplinary research and collaborative work. This is an opportunity to apply problem solving skills in a diverse group setting. In addition the regular meeting of the course, we will use a workshop model once a week to engage students in understanding and discussion of concepts of literature review, presentation and writing skills, and best practices to becoming a collaborative interdisciplinary researcher.

## What will I gain from this course?

- Present research to faculty and peers in a formal setting (resume building)
- Competitive edge for undergraduate research opportunities
